

## For ECR's and Other Embedded Systems

For any ECR with a serial port programmed to use Datacap's proprietary Serial Command Interface (SCI)

### IP Only Configuration IPTran™ with DT Emulation

Provides fast transaction processing using a persistent Internet connection.

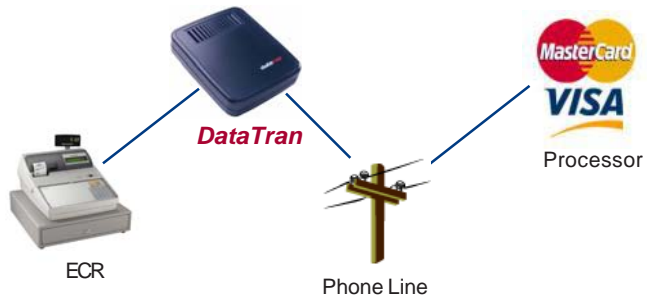

IPTran connects to ECR serial port and router/modem. Merchant parameters must be obtained from merchant's bank and input to IPTran via local software utility or factory load. NoLoad™ (no set up required) versions are available for selected processors.

### Dial Only Configuration DataTran™

Provides dial transaction processing through standard phone line.

DataTran connects to an ECR serial port and to regular phone jack. Merchant's parameters must be obtained from merchant's bank and input to DataTran via local software utility, factory load or remote dial in load. NoLoad™ (no setup required) versions are available for selected processors.

### IP with Dial Backup Configuration TwinTran™ with DT Emulation

Provides fast transaction processing using a persistent Internet connection and automatic fail over to dial transactions through a standard phone line in the event of Internet service failure.

Connects to an ECR serial port, a router/modem and regular phone jack. Merchant parameters must be obtained from merchant's bank and input to TwinTran device via local software utility, factory load or Internet. NoLoad™ (no set up required) versions are available for selected processors.
